terranean species, a feature which is reflected in their audiogram.

an obviously suprathreshold sound was presented in order to avoid a mild electric shock from the spout. This response was classified as a 'hit' if the trial contained a pulsing tone, and as a 'false alarm' if no tone

### 2.1. *Animals*

containing a tone. Both the hit and false alarm rates were determined for each block of 6–8 warning trials (which also included approximately 25 safe trials) for each stimulus condition. The hit rate was corrected for
